

Every student deserves to hear the lecture.

We turn unclear Hebrew lecture recordings into accurate captions and ready-to-use study material — automatically.

“For three years I sat with recordings I could not follow. No captions — or captions that got every technical word wrong.”

Adi Tapiero

Computer science student, hearing impaired.
She built the tool she needed. It turned out everyone needed it.

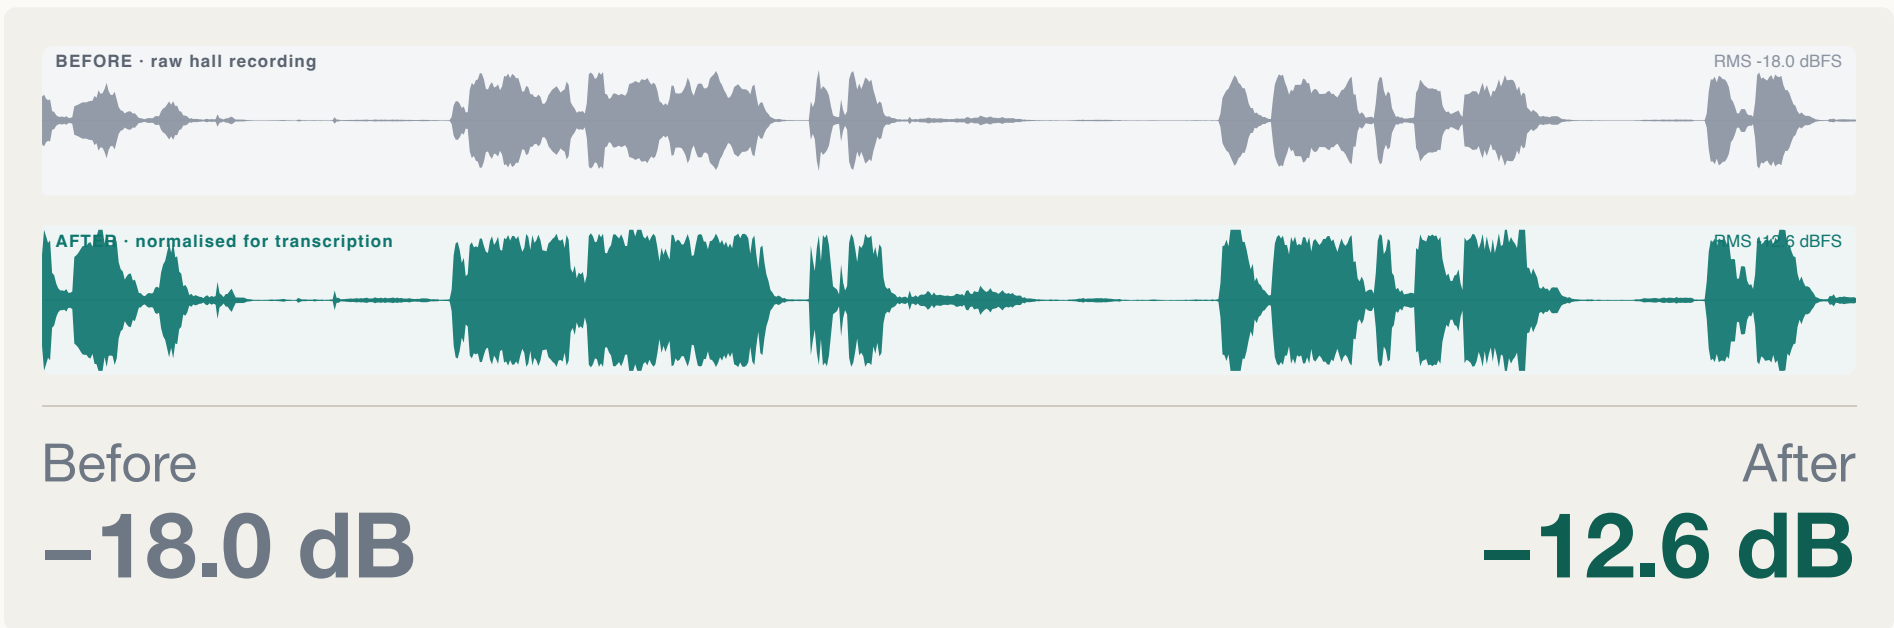

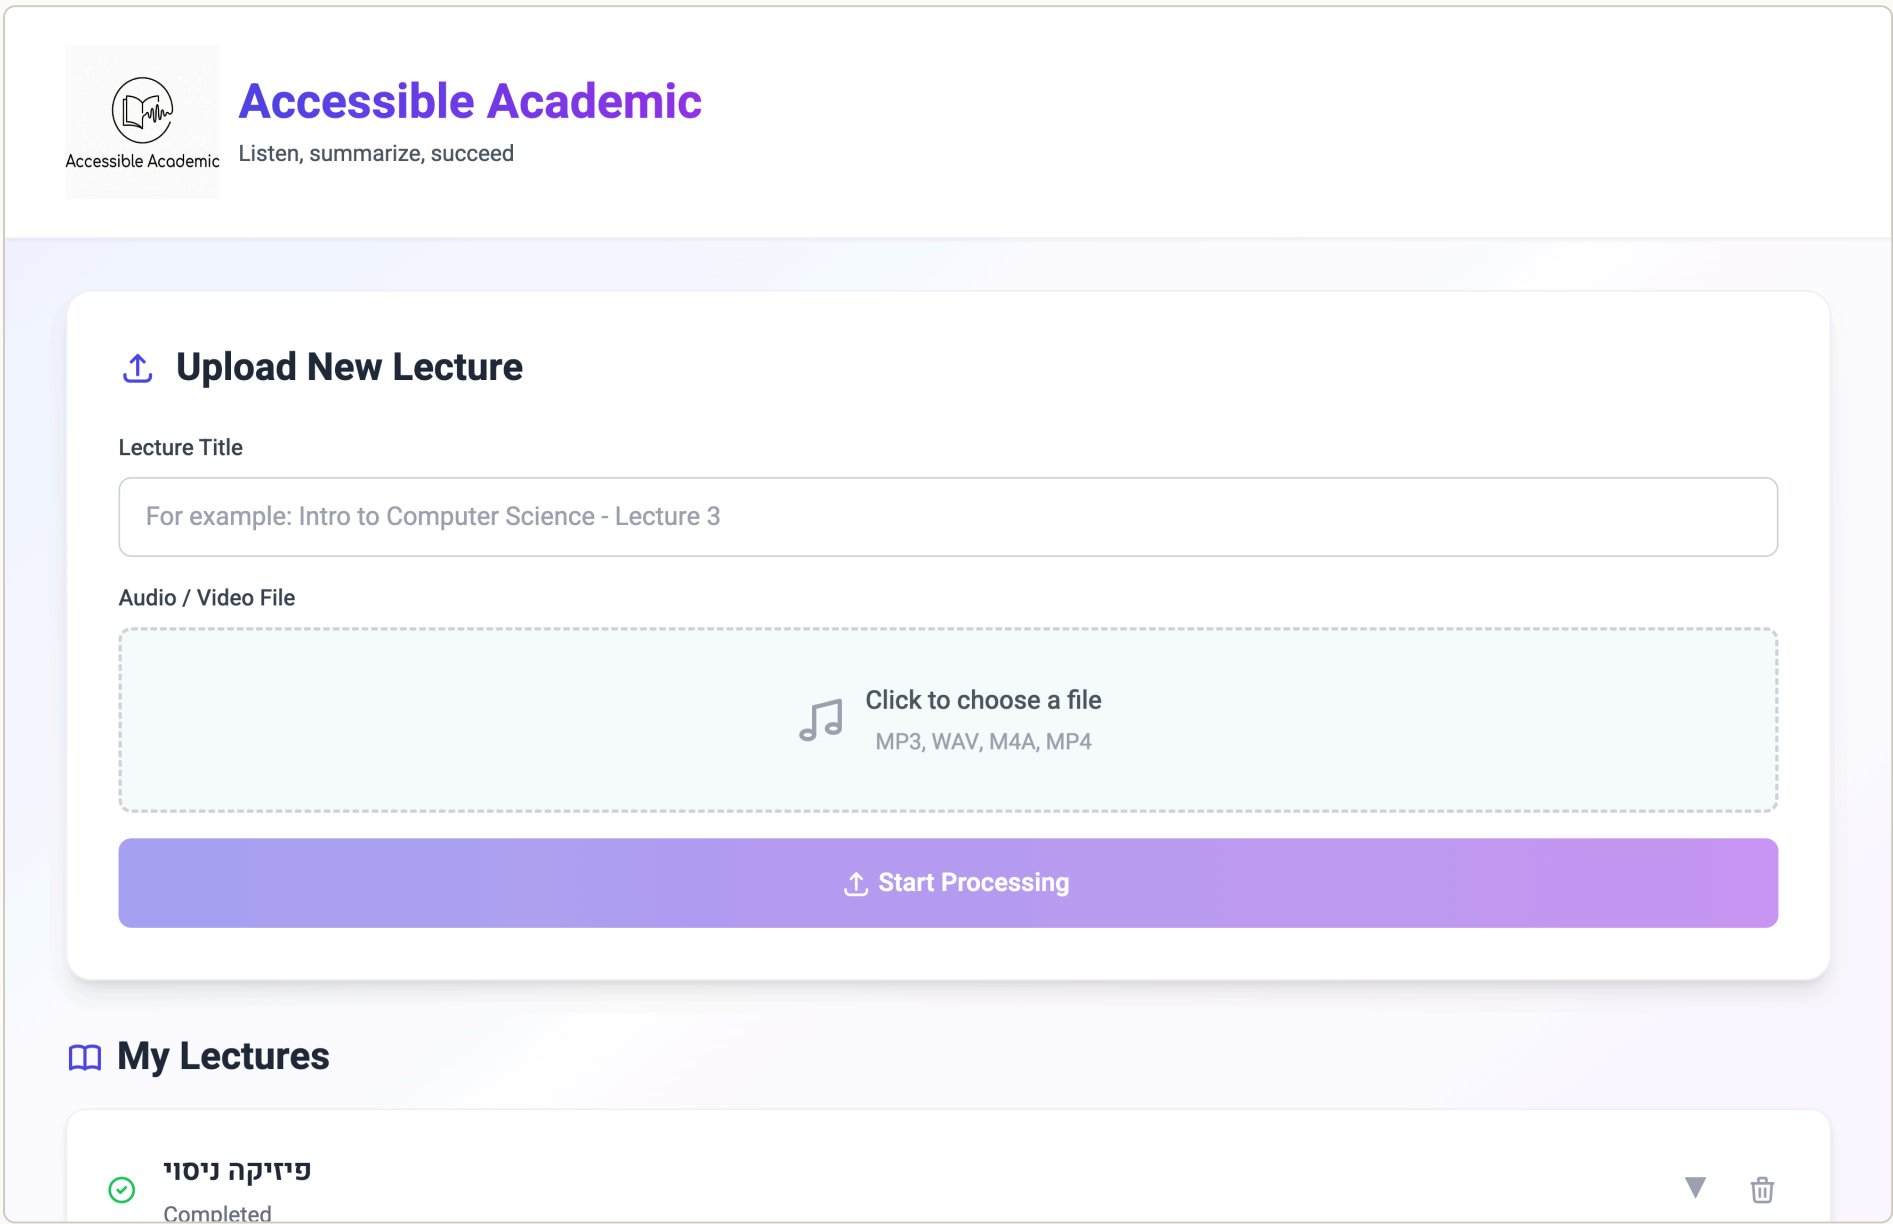

Accessibility shouldn’t be a checkbox.
It should be a commitment.

How it works

Upload once. Everything else is automatic.

1 Upload the recording

Any lecture file, straight from the browser. Nothing to install.

2 We rescue the audio

Muffled hall recordings are cleaned up before a single word is transcribed.

3 Watch, read, revise

Captions timed to every word, plus summaries and flashcards to take away.

Hebrew, done right

Including the technical vocabulary automatic captions always break on.

Summaries you can trust

Checked against the lecture itself, so nothing is invented.

Formulas stay formulas

Mathematics survives into Word and PDF as real equations.

Yours to keep

PDF, Word and subtitle files. Nothing locked inside.
